EE 422C Quiz 2 instructions

The main aim of this quiz is to use the debugger.

You are given an implementation of Selection Sort with bugs in it. You have to write test cases to check its working, and then use the debugger to find and fix the bugs in it.

When you are done, submit your testcases and the fixed SelectionSort.java and show your TA how you used the debugger.

You may not be able to find the bugs in time. If so, please turn in whatever you have done.

What to turn in:

1. SelectionSortTests.java (JUNIT test file)
2. SelectionSort.java, with comments
